Russian-Ukrainian War from the Point of Seeing of Natiology 126

The aim of the article is the analysis of the factors effecting the mechanism of the modern cyclical movements of the market economy and the long term prospects of the world economy for the years to come. The author comes to the conclusions, that a noticeable deterioration of the recent world economic development and its prospects does not mean that the market system has exhausted the potential for growth. A rapid economic expansion of some developing countries, first of all China and India, changes the world economic structure, but at the same time strengthens the general foundation of the market economy. Some new theoretical propositions concerning the essence and the laws of development of the chinese socio-economic system are also made in the article.
